# Tribute Labs - UI Engineer Take Home

Welcome!

We've loved our conversation so far—your approach, background, and curiosity fit right in with how we build at Tribute Labs. To give you space to shine, we've set up a short take-home assignment that mirrors the ownership you'd have on day one.

Project Overview

We recently scoped and are going to release a brand-new **adin.online** landing page. Your task is to output this landing page from scratch, using whatever AI tooling-based workflow you think makes sense to showcase your craft

Compensation	**$500 on delivery. Michael Chan—our General Counsel—will handle the payment logistics.**
Timeline	We estimate the work will take **about two focused days**, but the schedule is yours—tell us what works!

Preferred Stack	Next.js + Tailwind (or any modern stack—just explain your choice in the notes).

Deliverables & Scoping

1. **Github Repository** – share a link to a github repo and grant edit access if private.

2. **Next.js and Tailwinds** – the app should be a Next.js app, with tailwinds css

3. **Staging link** – share a link to a staging URL (on vercel) or let us deploy it to vercel from your repo.

4. **Build notes** / **loom video** – outlining:

   ○ decisions you're proud of

   ○ trade-offs you made

   ○ "fast follows" & nice-to-haves you'd tackle next

5. **Discord handle** – So we can open a direct channel for quick questions during the project.

Resources

● **Figma file** – *Landing Redesign*

● **Icon pack** – Adin Icons

● **Figma password:** HelloTribute

A Few Notes

This assignment is intentionally light; day-to-day we iterate closely and never just "throw work over the fence." Feel free to push your creativity—animations, accessibility wins, responsive edges—whatever best shows your style!

Questions or blockers? DM us on Discord once you share your handle, or email **greg.christian@tributelabs.xyz** and **aaron@tributelabs.xyz**.

Excited to see what you build!
